FOCUS ON PROGRAMMING

LET SPICEKIT DO THE REST

SpiceKit is a software suite that allows developers to reliably and securely deliver applications to customers.

You create and develop the core program, and SpiceKit handles the rest. Focus on bringing ideas to the screen, and we'll take care of all the behind-the-screen logistics necessary to bring your product to market.

Coming up with an idea and writing code are only two of the many steps involved in creating a successful software product. SpiceKit handles all the other steps so you don't have to.

SpiceKit Complete:

SpiceKit brings together the key components of security and licensing, registration and distribution, sales and payment processing, server storage and updates.

Free yourself from the added overhead and time-consuming tasks of managing your software sales. Stay in complete control of your product.

SpiceKit Features:

Distribution

SpiceKit makes it easy to get your software out there using Tier IV data services provided by Canela. Directly manage trials, updates and in-app sales without waiting for someone else's approval. All this state-of-the-art technology, with absolutely no direct costs.

Auto Updating

Your customers can have the latest improvements, additions, and bug fixes every time they start your program. You control when, which, and how often updates go out to your users. Stacks, folders, files, and even standalones can be easily updated using the SpiceKit update architecture.

Flexible Installers

Create a small, lightweight installer that your customers can download quickly, and let SpiceKit download the rest of the required program files the first time your customer runs their software.

Trial Features

The best way to introduce a potential customer to your application is with a full-featured trial. Show off your program while remaining protected. SpiceKit gives you control over time restrictions and feature limitations.

Security and Licensing

You control the level of security and the types of licenses available. A standard sales model allows customers to securely purchase the application. If you prefer recurring income, offer a subscription licensing option payable via a small monthly or yearly fee.

Registration

The in-app registration process is seamlessly integrated with your program, providing you with key data about your markets. Get to know, and keep in touch with your customer base.

Processing

Don't waste valuable programming time on bookkeeping. SpiceKit gives you the convenience of accepting credit cards, without being hit with payment processing fees.

Micro-transactions

Offer additional add-on features in your software, and let customers select exactly what they want without having to leave your program––a great way to boost revenue.

SpiceKit Statistics

3	**Languages**
94	**Countries**
5,069	**Daily users**
40,552	**Hours of daily usage**
3.3 million	**Patients served monthly**
106,449	**Files served daily**
600	**Gigabytes served monthly**

SpiceKit Cost Difference

$0

paid by developer for integration

paid by developer for auto updates

paid by developer for file hosting

paid by developer for user information management

paid by developer for payment processing

paid by developer for sales tracking

paid by developer for technical support

Focus on what you do best, let SpiceKit do the rest
